

New York/ New Jersey Bight Oceans Initiative: A Workshop to Create a Seamless Network of Protected Shores

May 13th & 14th, 2008

Rutgers University Inn and Conference Center
New Brunswick, NJ

Agenda

Vision Statement: The National Park Service (NPS), U. S. Fish and Wildlife Service (FWS), the National Marine Sanctuary Program (NMS), and the National Estuarine Research Reserve System (NERRS) share a common goal of conserving sensitive coastal and marine resources and ecosystems through the management of marine sanctuaries, national parks and coastal areas, estuarine research reserves and national wildlife refuges. To this end, cooperative conservation efforts by these agencies will enhance their abilities to protect and conserve natural and cultural marine resources. The creation of a seamless network of protected shores will establish a working relationship at the national, regional and local levels and will facilitate inter-agency communications and coordination of programs while providing a means to share knowledge, and resources. The following outcomes will be achieved: 1) improved management and operational efficiencies; 2) increased understanding of important natural and cultural resources within the areas managed; 3) increased effectiveness of joint planning efforts; 4) enhanced public awareness and education; 5) improved law enforcement and rescue capabilities; and 6) identification of shared research and/or monitoring priorities
